No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 34,

Patent No. 6346510
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TAPLICANT: FOlkman, Judah
APPLICANT: FOlkman, Michael
TITLE OF INVENTION: Therapeutic Antiangiogenic Endostatin Compositions
TITLE OF INVENTION: Therapeutic Antiangiogenic Endostatin Compositions
CURRENT APPLICATION UNMER: US/09/315,689
CURRENT APPLICATION UNMER: 1999-05-20
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PatentIN Ver. 2.0
SEQ ID NO 6
LENGTH: 534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

Sequence 30, Application US/09206059

Patent No. 6201104

GENERAL INFORMATION:

APPLICANT: MacDonald, Nicholas

APPLICANT: MacDonald, Nicholas

TITLE OF INVENTION: Angiogenesis-Inhibiting Protein Binding Peptides and

TITLE OF INVENTION: Proteins and Methods of Use

TITLE OF INVENTION: Proteins and Methods of Use

CURRENT APPLICATION NUMBER: US/09/206,059

CURRENT APPLICATION NUMBER: US/09/206,059

CURRENT PILING DATE: 1998-12-04

NUMBER OF SEQ ID NOS: 80

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 30

LENGTH: 552

Pred. No. is the number of results predicted by chance to have a

em\_htgo\_other:\*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Loses I to 1615)

Primary structure of the alpha 1 chain of mouse type XVIII collagen, partial structure of the corresponding gene, and comparison of the alpha 1 (XVIII) chain with its homologue, the alpha 1 (XVIII) chain with its homologue, the Jana 1 (XV) collagen chain
